FISCAL IMPACT STATEMENT

LS 7154 **DATE PREPARED:** Jan 18, 2000
BILL NUMBER: HB 1302 **BILL AMENDED:**

SUBJECT: Public employee pensions and health benefits.

FISCAL ANALYST: James Sperlik
PHONE NUMBER: 232-9866

FUNDS AFFECTED: X GENERAL
X DEDICATED
FEDERAL

IMPACT: State & Local

Summary of Legislation: (1) This bill permits the surviving spouse of a retired state employee to remain eligible for the retired employee's group health insurance until the surviving spouse remarries or becomes eligible for Medicare. (Current law terminates the surviving spouse's eligibility two years after the date of the employee's death.)

(2) This bill also provides that up to $5,000 (instead of $2,000) of compensation received by a member of the Public Employees' Retirement Fund (PERF) or the Indiana State Teachers' Retirement Fund (TRF) in contemplation of the member's retirement may be included in determining the average of the annual compensation for purposes of the PERF and TRF pension formulas; (3) provides military service credit under certain conditions for a member of TRF who completed his or her military service before beginning a four year approved teacher training program.

Effective Date: Upon passage.

Explanation of State Expenditures: (1) Currently, there are 51 families and 258 singles participating in the state retiree health insurance program. It is from this total group that the eligible spouses would emerge. Specific data on the number of potential spouses who would be eligible under the new guidelines is not known, although the number is expected to be small. A very few of the singles may be surviving spouses still eligible under the existing two year limit. State retirees pay both the employer and employee share of the health insurance premium. The annual cost for single coverage ranges from $2,831 per year to $3,050 per year, while the annual cost for family coverage ranges from $6,516 to $8,338 per year.

The Department of Personnel reports that retirees cost the state more than the actual premium paid due to adverse experience. For every $1 paid by a retire, the cost to the state is approximately $2.30. The estimated cost to the state for the proposed eligibility change would range between $3,680 and $10,839 per participant per year, depending upon individual or family coverage and the particular health care provider.

(2) The bill increases the amount from $2,000 to $5,000 of compensation received by a member of PERF or TRF in contemplation of the member's retirement that may be included in determining the average of the annual compensation for purposes of the PERF and TRF pension formulas. The impact is as follows for both PERF and TRF:

Public Employees Retirement Fund (PERF)

	State	Municipalities	Total
Increase in Unfunded Accrued Liability	$6.6 M	$11.7 M	$18.3 M
Increase in Annual Cost	$480,000	$850,000	$1,33 M
Increase in Annual Costs as a % of Payroll	0.04%	0.05%	0.04%

The funds affected are the State General Fund (55%), or $264,000, and various dedicated funds (45%), or $216,000. The percentage split represents the amount the State General Fund and various dedicated funds contribute to Personal Services in the State budget.

Teachers' Retirement Fund (TRF)

In general, for every $1,000 of average lump sums included in the average final compensation, actuarial accrued liabilities are increased by approximately $23 M. The increase in annual payout for the first two years is estimated to be $100,000 the first year and $200,000 the second year. The fund affected is the State General Fund.

(3) Military Service Credit Teachers' Retirement Fund (TRF)

This part only applies to the TRF. The TRF surveyed 30,000 TRF retirees, with 4,000 responding. The average teaching service of those who responded was 30.7 years, with the average military service amounting to 2.5 years. The average age of the respondents was 71.9 years and the average current pension was $11,184. The average increase in pensions if six years of military service were granted would be 7.8% and the increase in unfunded accrued liabilities would total $24.2 million. The increase in payout for the first year would be $2.5 million and $2.4 million in the second year. The fund affected is the State General Fund. This is for the pre-1996 Plan (Closed Plan).

The survey for active members of the TRF was sent to 84,000 active teachers, with 400 respondents. The average teaching service of those who responded was 23.1 years, with the average military service amounting to 3.1 years. The average age of the respondents was 53.6 years and the average current salary of those who responded was $53,765. If the six years of military service were granted, there would be an increase in the unfunded accrued liabilities of $49.4 million.

Below is a table that recaps the estimated costs of granting six years of military service to actives and retirees:

	Closed Plan	New Plan
Increase in Unfunded Accrued Liabilities:	(in millions)	
Actives	$49.4	$2.5
Retirees	$24.2	0.0
Total	$73.6	$2.5
Increase amortized over 40 years % of payroll	0.14%	0.02%
Increase in State Payout current retirees:		
First Year	$2.5	
Second Year	$2.4	

Explanation of State Revenues:

Explanation of Local Expenditures: (2) See table above in Explanation of State Expenditures for the impact on municipalities for the Public Employees Retirement Fund (PERF). For TRF, the impact will depend upon the number involved. For local school corporations, it could increase the percent of payroll required to fund the new benefits.

(3) See table above for TRF. It is possible that there might be members of the 1996 Fund (New Plan) who would be eligible to retire with an increased benefit because of the provisions of this bill. The impact will depend upon the number of would be eligible for the benefit. For local school corporations, it could increase the percent of payroll required to fund the new benefit. The current cost of payroll is 8.5%.

Explanation of Local Revenues:

State Agencies Affected: Teachers' Retirement Fund; Public Employees Retirement Fund.

DEFINITIONS

Unfunded Accrued Liability The Unfunded Accrued liability (sometimes called the unfunded liability) of a retirement system at any time is the excess of its actuarial liability as that time over the value of its cash and investments.
